How To Compute The Odds of Powerball

Tony Jiang

January 15, 2016

Powerball odds and probabilities for the Powerball Jackpot and how to calculate these Powerball odds. Additional calculations show tie probabilities and expected return on your investment.

Updated for the 69/26 Game

Concise Table of Powerball Odds (Mathematical derivation below)

Ticket Matches	Payout	Odds	Probability
5 White + PB	Jackpot	1 in 292,201,338.00	0.000000003422
5 White No PB	1,000,000	1 in 11,688,053.52	0.00000008556
4 White + PB	50,000	1 in 913,129.18	0.000001095
4 White No PB	100	1 in 36,525.17	0.00002738
3 White + PB	100	1 in 14,494.11	0.00006899
3 White No PB	7	1 in 579.76	0.001725
2 White + PB	7	1 in 701.33	0.001426
1 White + PB	4	1 in 91.98	0.01087
0 White + PB	4	1 in 38.32	0.02609
Win something	Variable	1 in 24.87	0.0402

Game Rules

The numbers picked for the prizes consist of 5 white balls picked at random from a drum that holds 69 balls numbered from 1 to 69. The Powerball number is a single ball that is picked from a second drum that has 26 numbers ranging from 1 to 26. If the results of these random number selections match one of the winning combinations on your lottery ticket, then you win something.

You can also buy a Power Playoption. The multipliers in the 69/26 Power Play game increase the payout amounts for the non-jackpot prizes as shown in the Power Play Option section. (Scroll down the page.)

In the game version that began as of Jan. 15, 2016, it costs $2 to buy a ticket instead of the previous $1. The Power Play option costs another $1; and as noted above, the payout amounts have been changed.

Before we start computing the odds and probability, you need to know some basics of combination in pick n balls from m balls. That is, you should know how to compute how many ways to choose n(n<=m) balls form a pool of m balls. Imagine we pick one ball at a time, we have m ways to choose the first ball, then m-1 ways to choose the second, m-2 ways for the third ... so we end up with m*(m-1)*(m-2)*(m-3)..(m-n) ways. This can be easily expressed in factorial format m!/(m-n)!. But, wait,the order of the five numbers does not matter. For each five-number, there are 5! ways to rearrange the order, so we in fact count the same ticket for n! ways. The botoom of line is, there are in fact m!/((m-n)!*n!). In the case of Powerball, there are total 69!/(64!*5!) ways to choose the 5 white balls and 26!/(25!*1!) ways to choose the power number. And that final number is 292,201,338. Just keep that in mind as we need this number for the computation. Let's call it T. ##Total how many different ticket we can have This is the same as how many ways we can pick the 5+1 numbers for a ticket.

```
factorial(69)/(factorial(64)*factorial(5))*26
```

```
## [1] 292201338
```

Alternatively, we can use choose() function from R to compute it.

```
choose(69,5)*choose(26,1)
```

```
## [1] 292201338
```

Winning Odds

So we know that there are possibily 292,201,238 ways, if we divide that by number of ways winning the lottery, we can get the odds ratio as 1 in xxxx. or we can divide that number by 292,201,238 to get the probability of winning. Let's say we want to win by matching m white balls and n (note that n can only be 1 or 0) powerball. Since five numbers from 1-69 have already been used in the jackpot ticket. we only have 64 nubmers to pick from to make up the rest *lose* numbers (5-m in total). Also we need factor in there are more than one way to pick which m number we match the jackpot ticket. If we have to match powerball (n=1), we have only 1 way to win (pick 0 form 25). If we dont have a match with powerball number (n=0), we have 25 ways to win (pick 1 from 25). So the formula to compute the number of ways to win is choose(64,m)*choose(5,m)*choose(25,n)/(choose(69,5)*choose(26,1))

5 White ball + PowerBall (Jackpot)

```
choose(64,0)*choose(5,0)*choose(25,0)/(choose(69,5)*choose(26,1))
```

```
## [1] 3.422298e-09
```

```
(choose(69,5)*choose(26,1))/(choose(64,0)*choose(5,0)*choose(25,0))
```

```
## [1] 292201338
```

The odds of winning the jackpot is simply one in 292,201,338, p=0.000000003422

5 White ball + No PowerBall

```
choose(64,0)*choose(5,0)*choose(25,1)/(choose(69,5)*choose(26,1))
```

```
## [1] 8.555745e-08
```

```
(choose(69,5)*choose(26,1))/(choose(64,0)*choose(5,0)*choose(25,1))
```

```
## [1] 11688054
```

The odds of winning the jackpot is simply one in 11,688,053.52, p=0.00000008556

4 White ball + PowerBall

```
choose(64,1)*choose(5,1)*choose(25,0)/(choose(69,5)*choose(26,1))
```

```
## [1] 1.095135e-06
```

```
choose(69,5)*choose(26,1)/(choose(64,1)*choose(5,1)*choose(25,0))
```

```
## [1] 913129.2
```

The odds of winning the jackpot is simply one in 913,129.18, p=0.000001095

4 White ball + No PowerBall

```
choose(64,1)*choose(5,1)*choose(25,1)/(choose(69,5)*choose(26,1))
```

```
## [1] 2.737838e-05
```

```
(choose(69,5)*choose(26,1))/(choose(64,1)*choose(5,1)*choose(25,1))
```

```
## [1] 36525.17
```

The odds of winning the jackpot is simply one in 36,525.17, p=0.0.00002738

3 White ball + PowerBall

```
choose(64,2)*choose(5,2)*choose(25,0)/(choose(69,5)*choose(26,1))
```

```
## [1] 6.899352e-05
```

```
(choose(69,5)*choose(26,1))/(choose(64,2)*choose(5,2)*choose(25,0))
```

```
## [1] 14494.11
```

The odds of winning the jackpot is simply one in 14,494.11, p=0.00006899

3 White ball + No PowerBall

```
choose(64,2)*choose(5,2)*choose(25,1)/(choose(69,5)*choose(26,1))
```

```
## [1] 0.001724838
```

```
(choose(69,5)*choose(26,1))/(choose(64,2)*choose(5,2)*choose(25,1))
```

```
## [1] 579.7646
```

The odds of winning the jackpot is simply one in 579.76, p=0.001725 ### 2 White ball + PowerBall

```
choose(64,3)*choose(5,3)*choose(25,0)/(choose(69,5)*choose(26,1))
```

```
## [1] 0.001425866
```

```
(choose(69,5)*choose(26,1))/(choose(64,3)*choose(5,3)*choose(25,0))
```

```
## [1] 701.3281
```

The odds of winning the jackpot is simply one in 701.33, p=0.001426

1 White ball + PowerBall

```
choose(64,4)*choose(5,4)*choose(25,0)/(choose(69,5)*choose(26,1))
```

```
## [1] 0.01087223
```

```
(choose(69,5)*choose(26,1))/(choose(64,4)*choose(5,4)*choose(25,0))
```

```
## [1] 91.97746
```

The odds of winning the jackpot is simply one in 91.98, p=0.01087

0 White ball + PowerBall

```
choose(64,5)*choose(5,5)*choose(25,0)/(choose(69,5)*choose(26,1))
```

```
## [1] 0.02609335
```

```
(choose(69,5)*choose(26,1))/choose(64,5)*choose(5,5)*choose(25,0)
```

```
## [1] 38.32394
```

The odds of winning the jackpot is simply one in 38.32, p=0.02609

Overall the chance of winning

```
(choose(64,0)*choose(5,0)*choose(25,0)+choose(64,0)*choose(5,0)*choose(25,1)+
  choose(64,1)*choose(5,1)*choose(25,0)+choose(64,1)*choose(5,1)*choose(25,1)+
  choose(64,2)*choose(5,2)*choose(25,0)+choose(64,2)*choose(5,2)*choose(25,1)+
  choose(64,3)*choose(5,3)*choose(25,0)+choose(64,4)*choose(5,4)*choose(25,0)+
  choose(64,5)*choose(5,5)*choose(25,0))/(choose(69,5)*choose(26,1))
```

```
## [1] 0.04021384
```

```
(choose(69,5)*choose(26,1))/(choose(64,0)*choose(5,0)*choose(25,0)+choose(64,0)*choose(5,0)*choose(25,1
  choose(64,1)*choose(5,1)*choose(25,0)+choose(64,1)*choose(5,1)*choose(25,1)+
  choose(64,2)*choose(5,2)*choose(25,0)+choose(64,2)*choose(5,2)*choose(25,1)+
  choose(64,3)*choose(5,3)*choose(25,0)+choose(64,4)*choose(5,4)*choose(25,0)+
  choose(64,5)*choose(5,5)*choose(25,0))
```

```
## [1] 24.86706
